

and about 80% are not receiving care.<sup>1</sup> The rate of unmet need for SUD care in the Detroit-Dearborn-Livonia is 81%.<sup>1</sup> Shortages of providers, financial concerns, and lack of transportation may serve as barriers in patient access to SUD program services. Geographic placement of facilities in neighborhoods should consider community need and accessibility. This geographic analysis investigates current SUD program facility locations in Detroit and their surrounding area community demographics.

## METHODS

- ArcGIS Pro, a geographic information systems application, was used to visualize and analyze data by creating 2D maps and tables.
- Data on licensed substance use disorder (SUD) programs, medically underserved areas, and zip codes was retrieved from the State of Michigan's and City of Detroit's GIS Open Data portals.
- 2019 Census tract data was used to run statistical summaries of demographics.
- Location analysis was conducted using 1-mile buffers.
- Criteria for medically underserved areas/populations (MUA/Ps) set by HRSA Office of Rural Health Policy and based on Index of Medical Underservice (IMU). Four criteria: population to provider ratio; percent of the population below the federal poverty level; percent of the population over age 65; and infant mortality rate.<sup>2</sup>

### CONCLUSIONS

• Zip codes 48227 and 48228 have a population greater than 40,000 and an average household income less than \$43,100. These zip codes also have fewer SUD program facilities and are further away from other SUD program

• SUD program facilities are generally accessible in Detroit. Most of them are located around the eight hospitals in the city, which are in central and east

• The west side of the city makes up a large portion of the city's population; however, there are fewer SUD program facilities in this area. • Community health services and SUD programs may consider expanding their services to the west side of the city to improve patient accessibility.
